\$LAMBO Token

A New Breed of Memecoins

Litepaper v1.1

I. Introduction

\$LAMBO is a new memecoin that is quickly becoming popular because of its connection to memes. This document explores what makes the **\$LAMBO** project special and why people are interested in it, especially because it has a limited number of tokens and will be launched at 0.0001.

II. Limited Token Supply

\$LAMBO is different from other memecoins because it has a limited number of tokens. This is important because it makes each token more valuable and interesting to people who want to invest. It's like when something is rare and hard to find, people want it more. This can also mean that the value of the \$LAMBO token might go up in the future.

III. Launch Price at \$0.0001

When \$LAMBO was first thought up, the people behind it decided to launch it starting at \$0.0001. This is different from other new memecoins that often start with prices that are much less. Starting at a higher price than most memecoins gives people more confidence in the \$LAMBO token because it can be more stable and reliable in the volatile crypto market. It might also bring in more people who are skeptical of other memecoins that start with very low prices and multiple quadrillions in total token supply.

IV. Memecoin Evolution

\$LAMBO is a memecoin, which means it's based on a popular internet joke or trend.

The trend behind the “Wen Lambo?” meme is people who invest in risky cryptocurrencies will make a lot of money and be able to buy a fancy sports car called a Lamborghini or Lambo. It's also a play on words with the \$LAMBO token sporting a degenerate lamb wearing a bright red bowtie. This makes \$LAMBO popular with people who like memes and humor. The popularity of the meme will help \$LAMBO become more well-known and successful.

V. Market Impact

\$LAMBO is interesting because it's not just a joke or a meme. It's a serious investment opportunity that has the potential to make people money. Because of its limited number of tokens, \$LAMBO has sparked discussions about the future of cryptocurrency and what's possible. It's important to remember that investing in any cryptocurrency is risky, but \$LAMBO is an example of how people are experimenting and trying new things in this exciting and evolving space.

VI. Tokenomics

- **Launch Price: \$0.0001**
- **Total Supply: 34,643,662.287895 \$LAMBO**
- **Burning 42.069% of entire supply forever**
- **10% of the supply to devs/marketing**
- **0% tax on buys/sells**
- **Liquidity locked**
- **Max buy/sell function enabled at launch**
- **Contract verified on Etherscan**
- **Contract will be renounced when stable liquidity is reached(in order to disable max buy/sell function)**
- **100% community owned**

VII. Conclusion

\$LAMBO is a new and unique memecoin that is becoming popular because of its connection to memes. Its limited number of tokens make it different from other memecoins, and its growing popularity shows how humor and serious investment can intersect. While investing in cryptocurrencies is risky, the \$LAMBO is an example of the exciting and innovative things happening in the world of digital assets.
